1. Introduction

This document aims to provide step-by-step guidance on assembling the hull plates of the Autonomous Surface Vessel (ASV) hull. Each plate has its identification defined in the “*DH200_Cutting Plan Report.pdf*” file, which can be checked into the files inside the “*cnc_files*” folder. Thus, Section 2 shows the illustration of the assembly, and Section 3 brings pictures of the real assembly. The plates were joined using screws and a standard PVC glue. For the screws, the holes and threads were done before joining. For the PVC glue, we used alcohol to clean the surface before applying the glue.
